MUSA PPD Stats Explanations

Hells bells I thought this would be obvious but then it occurred to me (after a few beers) maybe only to gearheads like me.

<u>Stat:</u>	<u>What the heck it is:</u>
Ranking	How far you are up on the food chain for this list.
Name	The Message Board name for this person... more of a demographic than a stat. Note people who change their names may lose their history if no one tells me about it.
Registered	Date person first signed up on the board as shown in their footer, used to calculate the denominator in posts per day.
Days on Board	Day between poster's registration (above) and date of stats update.
Years on Board (memo)	Days on board divided by 365.25 (to take into account leap years every four years. [did I mention I am a bit of a perfectionist when it comes to things other than how badly I play kickball?])
Cumulative Posts	Current "odometer" reading of a person's posts as of the latest stats update from their footer.
Posts Per Day (PPD)	Good old-fashioned long division of Cumulative Posts into [you guessed it] Days on Board. This is this person's AVERAGE posting "velocity". Note this is a VERY rough measure as most people only post during weekdays (at work I presume! ;)) during Spring and Fall kickball season... there is some but very little "off-peak" posting activity. Because of these "dead periods" most peoples' true posting velocity during working hours during kickball season is actually MUCH HIGHER.
Est Days 2 RUFKM	Just a straight line extrapolation of if this person continues to post at the average rate when they will hit the 6000 post "Are You Fucking Kidding Me?" top status.
Prev Cum	This is just a VLOOKUP (for you Excel nerds out there) of this person's previous Cumulative Posts since the last stats update. An intermediate calculation only.
Posts Since 6/14/07	Straight subtraction of Cumulative Posts (current) and Prev Cum to show how many posts this person has hit the board with this since the last stats update.
Prev PPD	Stands for Previous Posts Per Day, just another VLOOKUP of the last stats update data to see what their second most recent posting velocity is.
Incr/ (Decr)	Straight subtraction of current Posts Per Day and Previous Posts Per Day to show the change in posting velocity.
% of Total Board	The percentage of all the posts on the Milwaukee MUSA Kickball message board that this person's posts represent, just long division of their Cumulative Posts with the total I get from the message board's main screen and really only interesting for PL as the rest of us are low single digits at best.
Cum %	This is a unique stat to the second chart to show how the big guns on the stats list comprise usually over 98% of the board's total post, just really shows how concentrated the postings are among a few people as I suspect the "80-20" rule is probably more like "98-6" for the message board (i.e. 6% of the registered users do over 98% of the posting!).
